Projects

Social Media Application – Full-stack social media application using React, Redux, Node.js, and style elements from Material UI. The backend was tested through Postman and deployed with Firebase. Users have the ability to like, comment, post, receive notifications, edit their own profile, and view other profiles.

Recipe Application – A recipe application built with React which pulls recipe data from the Edamam API. Users can search for popular dishes by main ingredient. Searches return a list of dishes with ingredients, a picture, and a link to the full recipe all packed into a responsive grid design.

Ekiben – A static landing page for a local business built using HTML, CSS, and JavaScript. The site contains basic business operations and pictures to entice potential customers. The navbar is responsive to scrolling and the entire webpage is responsive, scaling down for a pleasant mobile user experience.

Professional Background

Northrop Grumman
Baltimore, MD

Supply Chain Planning Specialist   08/2019 – present
